

# Flavour Wheel for Plum and Mirabelle Prune Distillates

Sonia Petignat-Keller  
www.destillate.agroscope.ch

## What is a flavour wheel?

In order to better characterize the diversity of plum and Mirabelle prune distillates, Agroscope has developed a flavour wheel. The common vocabulary facilitates the description and tasting. A standardized system with objective criteria increases the accuracy of the sensory description and enhances the competence of the panelist.

This flavour wheel consists of three concentric circles. These circles are divided into eight flavour categories (separated by color): fruity, floral, vegetable, spicy, fatty, roasted, off-flavours and taste. In the inner circle these categories are divided into respective sub-categories such as stone fruit, berries, citrus, etc. The outer circle consists of 65 unique attributes, which are characterized by flavour references. They provide evidence of the great diversity of flavours and tastes in plum and mirabelle prune distillates and help generate individual flavour profiles for each variety.
